AN APPARATUS AND METHOD FOR GENERATING A WRITE CURRENT FOR A MAGNETIC MEMORY CELL

Abstract

The invention includes an apparatus and method for generating a write current for a magnetic memory cell. The apparatus includes a write current generator for generating a write current, the write current being magnetically coupled to the magnetic memory cell, the write current being magnetically coupled to the at least one test magnetic memory cell. A switching response of the at least one test magnetic memory cell determines a magnitude of the write current generated by the write current generator. The method for determining a write current for a magnetic memory cell includes supplying a test write current to a test magnetic memory cell, sensing a magnetic state of the test magnetic memory cell to determine a switching response of the test magnetic memory cell, and generating the write current having a magnitude that is dependent upon the switching response.
